

Operation “Don’t Tell the Girls”

This is an idea about insuring Donald John Trump is elected and that DJT selects me, John Lawrence Kanazawa Jolley, to be his cabinet table bus/water boy (THE “taster”) along with Anthony Michael Davanzo (Emanuel look alike, valedictorian of Delray, author of U.F. paper about the unsustainability of water control structures) for Secretary of State and Ambassador to the U.N., along with University of Florida Dr. of Wildflowers Hector Perez for new cabinet position, Head of the U.N. Chernobyl cleanup for “floater” position quote, “Women will not hear a solution to any problem”, and God (Boudrias Groves proprietor, top of the Kissimmee River flood plain and King’s Hwy., Fort Pierce, Florida) for legal witness if need be, able to assume any cabinet position. We come as a cabinet team supporting Donald John Trump as he initiates undamming the world’s rivers at a 1/3 to 1/4 rate the first year along with same reduction in fossil fuel use, reevaluate, likely undamming 1/5 to 1/6 of the world’s rivers the second year along with same in fossil fuel reduction... Reengineer civilization with collective productive structures.

The idea is that YOU would print this idea and send it in a letter to Donald J. Trump along with a save the manatee postage stamp.

I first got Trump elected in a deal I made with the secrete service out front of the White House, in the waning daze of the Obama Presidency, that’s how Mr. Trump beat Hillary, I picked him to win as he would be the most likely to assist me with the undam the world’s rivers and escape from hell idea.

This is a legal way for you to participate in solving the problems on this planet. We set DJT up with a cabinet team from the #1 school in the world. A team with all the correct characters to make it happen just like you want it to.

Also send the idea to others to get them to mail this recommendation to Mr. Donald J. Trump.

Resume in application for the position of Presidential cabinet table bus/water boy, THE "taster" with the one idea that works.

Career objective: Force dam fluidification, the collection of that which falls from the heavens and the replacement of the flush-toilet with the manual fertilizer machine. Be productive. Transport product past all dam obstacles and through any eventuality for all time.

Education:

University of Florida, Institute of Food and Agricultural Services, Environmental Horticulture

Work Related Experience:

- 1999-2001 Doorman, The Prime Minister of Canada
- 1999-2001 "Burnies" Valet, drove the getaway car at the largest heist in history for Mr. Bernard Lawrence Madoff
- May 2002 Stucco repair, Jack "The Boston MOB's Ledgerman"
- December 2010 Blew the shit out of the U.N. lunar eclipse induced East River backs up sewer into security council
- March 2013 Fired the Pope
- Thanksgiving 2013 Algiers Point ferry to New Orleans's Shops at Canal St. with Jack from the Men in Black (See picture "Six Fingered Jesus" depicted at New York's Riviera Café Bar)

Other Related Experiences:

- 1998 First time descent of Snake River from Jackson Hole to the sea with Thomas Shindelman
- 2003 Married in Kumamoto Japan, to Yi's daughter Misa Kanazawa
- March 2006 Replaced and reset the table on the illuminati Jose Marti International Airport Havana, Cuba
- 2011-2015 St. Helens to Port Isabel by canoe
- May 2014 BMOB OPP
- May 2015 66.6 kilogram mass recorded in Cuba's Immigration dungeon (I booked em)

Considering all the factors I recommend near 30% fluidification first year, a bit more than 10% dams made flowing second year, less than 10% the third year... At year 8 target 50% reduction in dam and ditch Ag.. This is based on 8 years for fruit trees to start producing fruit. Humans losing $\frac{1}{2}$ the dam food in processing and another $\frac{1}{4}$ in the trash. Note rainfall irrigated and pump irrigation not affected but by increase in fossil fuel costs. By reducing the amount of food lost in processing and thrown in the trash coupled with increase in kitchen garden, fungus wall, structural honey and animal food production... should have plenty to eat. Eat your dog or cat, get garden weed eating geese. With the last of the rivers made flowing likely to be determined by flow rate, sedimentation rate of reservoir filling mud and the life expectancy of the water control structure. So, we'd have a few small flow river/creeks at the top of watersheds and rocky island rivers left dammed. Its best not to undam all the rivers, likely retaining 1%-3% of dam and ditch Ag., it grows food. While not completely losing the art of it and the tools to do it, have the ability to quickly double dam and ditch Ag. To say 2%-6% so as to be better able to deal with any fruit and nut tree related disease as it relates to overall food production. And this 16-year idea to largely reengineer civilization comes with a 4-year grace period, for legal purpose, flexibility.

Let's say at 16 years fruit and nut production is high and we've reduced dam and ditch Ag. to 1%-3% total flow. Plenty of food to eat. With the remaining bit of dam and ditch Ag. split ½ "organic", ½ fossil fuel powered. This creates tourism possibilities where for instance you could go on a vacation from the flowing river world back to the "damages". With the possibility of an "Amish/Quaker/Mennonite land" where they're actually realistically maintaining the using of animals for power and the skills, knowledge of and the tools to do it. Some of these areas may even have the collective productive structures. With the fossil fuel powered ½ of the dam and ditch Ag. left we'd continue making a small fraction of the fossil fuel derived fertilizers and pesticides. Not completely stop doing the doom stuff, at least in the immediate future, it is a resilient system. With the fossil fuel reduction, the main idea is to lessen the amount of rock stacking, ditch digging, shed maintenance and flush toil in general. When viewed like an airplane landing we want the fossil fuel reduction rate to appear like a very short soft field with no landing. Eventually getting the rate of fossil fuel being burned or used to match its natural production. On this planet's surface with the way things are and what's been written, the team I, John Lawrence Kanazawa Jolley, present including Anthony Michael Davanzo (looks like Emanuel) and University of Florida Doctor of Wildflowers Hector Perez, we, along with President Donald John Trump (and I assume he would bring at least a 1/3 of our team with us to any table we go) may be able to easily make the presentation that's needed. Let's imagine its the 21st of January, 2025, noon Riverday, tomorrow's Tuesday and night. We've already had the Canadians, Brazilians, Mexicans, Cubans... crack open and start making fluid the Shark River dam in Florida, the lower Rio Grande presa, the lower Colorado River dam, the bottom Columbia River dam, dam #27 on the Mississippi River, the first dam coming up the Hudson River... and we've reciprocated, punching holes in nations water control structures on rivers. Checks in the mail, electronic funds have been transferred for the work accomplished or we're

writing the paper up now to be signed... We've established what we are doing, dam fluidification for money. Flooding not that bad, wildflower seeds are being planted... Where are we going with the idea's presentation? Should be pretty simple, have Mr. Davanzo, Sec. of State/Ambassador to the U.N. trade electronic signatures with King Saud. Davanzo's signature to be copied on paper and rubber cemented to the blank canvas backside of the \$500,000,000 Dali crucifixion painting. Saud's signature is he agreeing to reduce sweet crude output with our security presented. Note King Saud might offer to sell the endorsed Dali to the Israelis, see if he can get the Jews to buy it, or sell it to the Iranians first. With a deal to reduce sweet crude extraction see to get the President of Venezuela to do the same with the sour oil. More money to be made for longer with the idea. Having used the event of initiating undamming the world's rivers and correct skinsuit presentation as the lever to "lock the black stuff in the ground"-bible, use the reduced amount/more expensive liquid fossil fuel as a reward or "carrot" to get nations to burn less coal. With the President Donald John Trump, Dr. Wildflowers Perez led new cabinet position it may be best to have former Sec. of State Blinken (or perhaps Don knows of a better cut fellow say named, Ryan Blitzen, be Lt. Sec. of State and head for Helsinki, to see about getting the Finns to start trading dam fluidification "assaults" with the Russians... As far as the nuclear thing goes, go out to the most dangerous weapon in the world cornfields where the genetically engineered to kill the men-of-T (thinking reasonable conscious males in particular) foold is grown, pick out the most in need of repair nuclear missile silo hidden underneath the corn and start disabling the thing with the idea to use the warhead material as fuel on a nuclear-powered spaceship. And we'd initially design the ships to transport nuclear waste off the surface. Now at noon on Riverday, Jan.21, 2025, President Donald John Trump, Dr. of Wildflowers Perez (Latin American, Cuban American, Oriental/Portuguese, of the most enterprising of all the world's people genetic carrier) and I, should be in Okinawa, historically the center of negotiation for the Pacific. What I bring to the table is the answer to the question posed in the Japanese legend or what amounts to the most refined version of the Asian versions of the bible. I match the description of the lead character, able to walk the concrete

tightrope strung out over crystal clear pure water on one side, festering sewage on the other, hoops of fire, smoke, mirrors, pitfalls, dragons... He's been married to a Japanese female, Misa Kanazawa, writes letters to his former wife's sister, Yucca Kanazawa. "Appears in the East like a bolt of lightning"- John 7:27, flies into Japan on a 727 (you're welcome Boeing) and has lightning strike the glass ceiled dome of courthouse upon signature at official marriage ceremony. Claims Yi (Chinese God) was his father in law, "Yi" (Yoshimitsu Kanazawa) with great interest in space exploration says, "CCR" (Creedence Clearwater Revival). Being able to come into what may be the last confrontation of its type, as the U.S. and the Japanese completely assisting with everything they've got, the English signaling the same, with what amounts to China first and the rest of Asia from there is... as forceful of a presentation as could be made. Don't forget, not to slight Mr. Davanzo who looks like the photo of Emanuel from the bible, I've got scars on both feet, both hands and my backside as if I'd been pinned to a cross, stabbed in the back, escaped and the injuries healed. To Okinawa I also recommend bringing the sailor, Frenchman, who is or was the head of the U.N.'s Chernobyl cleanup. This being the immediate #1 complication of undamming the world's rivers, nuclear power plants. While the most of our team is in Okinawa I recommend having Mr. Davanzo at the Turkish National Library (those who don't ever forget) to make report of the successful negotiations as they come about. With the team thus assembled and in action we may realistically be able to sew up the idea, a 20 year flexible plan to reengineer civilization, in 48 hours. We should be able to do it, no problem. It amounts to restoring natural flow to the world's rivers, having the dams be at the surfaces available for solar and precipitation collection at structures for work, living and transportation, and the replacement of the flush toilet with a urine separating, composting, no flush, less toil, primarily manual fertilizer machine with front and rear water wash, blow dry, negative pressure ventilation... on this surface in order to have the dominant organism (people) be more principled and interesting so to make greater eventual opportunities. What should we as men tell the women? Working on the road construction traffic delay misery thing... (the dam reservoir tailrace no corduroy municipal water and sewer pipes are both leaking in

King Saud, friends & family,

When you all secured the Dali deal, as the projectile delivery man I heard the round slide in the chamber, the barrel clicked (fluid) closed, hammer back (I quit eating pork sausage) 'take aim, when I wrote this idea the hammer dropped. Thanks.

With the Dali presentation I recommend a mobile bazar motif (v) e display. Secure center top with a big meat hook, stainless steel fishing type flying gaff to block/tackle/cat head... lined harpoon tip, other gaffs with lines attached or not, meat hooks, hand held various fishing lines, shepard crook, falconry attachment... all adjustable by the viewers. Learn to use a line. Storytellers up front, making money in addition to the line... salespeople, steidlers steins, Lieblers, shindelman... selling

pencils, paper, watercolors... at the endorsed
blank back side. Viable fruit seed vendors...
Have an enjoyable time with its presentation
great for children and older alike, a Meccá
gift. All aboard!
